## Welcome to Seminar about “the role of electricity network companies in the future electrification”.

Swedish Electromobility Centre and Theme 5 are happy to invite you to this seminar about “the role of electricity network companies in the future electrification”.

As more and more vehicles are electrified, the need for electricity supply will increase. During this seminar, we will hear two electricity grid companies' views on electrification and what opportunities and challenges are seen from an electricity grid perspective. Per-Ola Andersson, Strategy & Business Development, E.ON and Fredrik Carlsson R&D portfolio manager, Distribution at Vattenfall, will present their views on these issues. During the seminar, we also discuss which laws that exist today for the electricity network companies to comply with and what their view is on the future. We also discuss the terms lack of electric energy (elenergi-brist), capacity shortages (kapacitetsbrist) and lack of electric power (effektbrist) and what this means for the development within the electromobility area.

**When:** 19 May 2021, 08:30-09:30

**Where:** Online via Teams

**Language:** This seminar will be held in Swedish

**Questions and registration** Please email [Cecilia.bostrom@angstrom.uu.se](mailto:Cecilia.bostrom@angstrom.uu.se), before 18 May 2021.
