

A Framework for Sustainable Urban Mobility

The Goal of the Project:

The project investigates the feasibility of establish a larger SEC project around the development of a framework for quantifying health and other life cycle impacts of different heavy vehicle options for city transports. The framework would be based on health impact, both locally and globally, as well as LCA, and would highlight the synergy between OEM vehicle data and customer policy motivational needs.

Expected Result:

A network of potential project partners and a first summary draft of a future application. Activities from the pre-study will be presented in a separate report.
