

Data REgulation And electroMobility (DREAM)

The Goal of the Project

- Investigate and analyze the ongoing EU legal initiatives for the regulation of data sharing, artificial intelligence (AI) and cybersecurity.
- Clarify the legal effect and impact these regulations and directives will have on electromobility.

Expected Result

- Clarify the legal prerequisites and remove barriers in the form of legal uncertainty for industry, agencies and academia .
- Support the automotive industry as well as agencies in the preparations for and during the implementation of the upcoming legal and regulatory changes
- The support aims to speed up the development towards a sustainable electrification of transportation.
