

Systemic Transition to Electrified Practice – Bridging the Policy-Practice Gap in Heavy Transport (STEP)

The Goal of the Project: To develop a deeper understanding of the systemic obstacles and interaction dynamics hindering the large-scale transition to electrified heavy goods transport in Sweden, by diagnosing the policy-practice gap between strategic, intermediary, and operational actors.

Expected Result: (1) A diagnostic report on systemic barriers in actor interaction; (2) a conceptual collaboration model tailored for heavy transport electrification; (3) a set of research questions and a committed cross-sectoral consortium for a Stage IV SEC application.
