

Dansmästaren Project: smart charging strategies

Dansmästaren (Uppsala, Sweden) is a multi-functional building that combines residential and commercial spaces with a parking garage equipped with EV chargers, renewable energy generation, and energy storage systems.

The Goal of the Project:

Fostering collaboration between stakeholders, we aim to develop a smart infrastructure for electric vehicle charging, including measurements, implementation of control strategies, and evaluation in a real-world facility.

Expected Result:

- ☐ Development of the energy management systems and models,
- ☐ Implementation and evaluation of different smart charging strategies,
- ☐ Increased knowledge in user's behaviour and acceptance,
- ☐ Co-creation of research with the public and private sectors.
